PRI 12-JUL-2001 >me 10, complete

Submitted (12-JUL-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk On Jul 8, 2001 this sequence version replaced gi:14575291.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mil subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Repli-243J3 is from the library RFCI-11.2 constructed by the group of pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

VECTOR: DBACG3.6

This sequence is the entire insert of clone RP11-343J3 The true right end of clone RP11-242G20 is at 139955 in this sequence. The true right end of clone RP11-242G20 is at 5588 in this sequence.

On Sep 18, 2002 this sequence version replaced gi:21738715.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence ontigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Submitted (26-MAR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 275924)

NOTE: This sequence may represent more than one clone.
NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

*NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

On May 13, 2003 this sequence version replaced gi:24818892.
The sequence in this sequence version replaced gi:24818892.
The sequence in this assembly is a combination of EAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature

New ovary specific genes and proteins, useful as a vaccine for treating patients with ovarian cancer, or for diagnosing and monitoring the presence and metastases of ovarian cancer in a patient.

Claim 1; Page 173-174; 260pp; English.

ABN87790 to ABN87882 represent human ovary specific nucleic acid (OSNA) sequences, and ABB79297 to ABB79370 represent ovary specific protein (OSP) sequences from the present invention. OSNA and OSP sequences have cytostatic activity, and can be used in vaccine production and gene therapy. An antibody that specifically binds to an OSP can be used for treating a patient with ovarian cancer, particularly for inducing an immune response against the ovarian cancer cell expressing the OSNA or OSP. The OSNAs and OSPs can also be used for diagnosing and monitoring the presence and metastases of ovarian cancer in a patient

(HUMA-) HUMAN GENOME

Birse CE, Rosen CA;

WPI; 2002-122018/16.

Novel 1405 isolated polypeptides, useful for diagnosis, treatment and prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders.

Claim 4; SEQ ID NO 619; 2081pp + Sequence Listing; English

The invention relates to novel genes (ABL89449-ABL90853) and proteins CC (ABB89040-ABB90444) useful for preventing, treating or ameliorating CC medical conditions e.g. by protein or gene therapy. The genes are CC isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic CC ansemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing (e), (e) neurological diseases such as myocardial ischaemias; (d) wound healing (f), (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) CC infectious. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly cfrom WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a nucleic acid molecule designated Gene 48 from CC the human cDNA clone HFCA174 (deposited as clone ATCC 97899 and ATCC CC 209045) which encodes a secreted human protein. The gene can be used to CC generate fusion proteins by linking to the gene to a human immunoglobulin CC protein as compared to the human protein only. The invention relates to CC 186 novel genes and their fragments (nucleic acid sequences AAV59511-CC V59812; amino acid sequences AAW74731-W75026) which are useful for CC preventing, treating or ameliorating medical conditions e.g. by protein CC or gene therapy. Also, pathological conditions can be diagnosed by CC determining the amount of the new polypeptides in a sample or by CC determining the presence of mutations in the new polynucleotides. CC Specific uses are described for each of the lew polynucleotides, based on CC which tissues they are most highly expressed in (see AAV59511 for described uses)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 84.9%;

The invention relates to an isolated protein that is one of 186 human CC secreted proteins, given in the specification. The protein is used in a condition in e.g. in the specification. The protein is used in a condition in e.g. humans, mice, rabbite, goats, horses, cate, dogs, chickens or sheeps. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, composed or treated include aniogenesis, nervous system disorders e.g. Alzheimer's disease, can also perfections caused by bacteria, viruses and fungi and coular disorders e.g. cerebral ischaemia, components, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used to aid wound confidency to maintain organs before transplantation, for supporting cell conformaty tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used to aid wound confidency to primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used to aid wound confidency to the primary tissue, to repenerate tissues and in chemotaxis. The components. The present sequence represents a condition a gene encoding one of the novel human secreted proteins of the invention. Note: other manual confidency and confidency and
                                                                밁
                                                                                                                      Ś
                                                                                                                                                                               В

The present invention relates to the isolation of novel human secreted proteins and the polynuclectide sequences encoding them. The invention CC producing human secreted proteins are useful for producing human secreted proteins. The polypeptide and polynuclectide sequences for the secreted proteins are useful for preventing, treating, CC ameliorating or diagnosing medical conditions such as hyperproliferative cdisorders (e.g. leukaemia or breast cancers) wounds, reproductive cc disorders, blood-related disorders (e.g. haemophilia or cthymic hypoplasia), immunodeficiencies (e.g. wiskott-Aldrich syndrome or cthymic hypoplasia) autoimmune disorders (e.g. wiskott-Aldrich syndrome or contitue sclerosis or Hashimoto's thyroiditis), allergies (e.g. asthma), contitue sclerosis, cerebral ischaemia or congenital heart defects), renal consorders (e.g. kidney failure), cardiovascultar disorders (e.g. anglina pectoris, neurological disorders (e.g. Alzheimer's disease or conformations), and inflammations (e.g. Crohn's disease). The colymerce data for this patent did not form part of the printed conformation, but was obtained in electronic format directly from the USPTO web site at segdata.uspto.gov/psipsDIDEntry.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

Tang Xue / Wehrman TY, TA T, Zhou P, (, Yang Y, Ma n T, Wang J, Ma Goodrich RW, Asundi V, Z) Ma Y, Yamazaki V, Chen R, , Wang D, Drmanac RT; Zhang J, R, Wang ; 'n Zhao QA, , Ghosh M; Ren

WPI; 2002-759812/82.

New polynucleotides comprising sequences assembled from expressed sequence tags (ESTs), useful for treating cell-proliferative, neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or platelet coagulation disorders.

Claim 1; SEQ ID NO 94; 1012pp + Sequence Listing; English

nucleotide sequence selected from any of 948 sequences (ABZ1119-CABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69894) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cellimaging, screening and for treating cellimaging, screening and for treating cellimaging, screening and for treating cellimaging and The invention relates to an isolated polynucleotide (I) comprising mucleotide sequences (ABZ11119ø

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

Claim 1; SEQ ID NO 624; 103pp; English

The invention relates to isolated polynucleotide (I) and polypeptide (II) csequences. (I) is useful as hybridisation probes, polymerase chain (C reaction (PCB) primers, oligomers, and for chromosome and gene mapping, CC and in recombinant production of (II). The polynucleotides are also used (in diagnostics as expressed sequence tags for identifying expressed (genes. (I) is useful in gene therapy techniques to restore normal (C useful for generating antibodies against it, detecting or quantitating a (II) is (II) and its binding partners are useful in medical imaging (C supplement. (II) and its binding partners are useful in medical imaging (II) (II) and its binding partners are useful for treating disorders (involving aberrant protein expression or biological activity. The (C diagnostics, forensics, gene mapping, identification of mutations (C diagnostics, forensics, gene mapping, identification of mutations (C amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic (C coding sequences of the invention. Note: The sequence data for this (C clectronic format directly from WIPO at the product of the involvence.) ftp.wipo.int/pub/published _pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes a breast tumour-associated protein. It was shown to have at least two-fold overexpression in breast tumour tissue. The invention relates to an isolated polypeptide comprising at least an immunogenic portion of a breast tumor-specific protein, or its variant that retains the ability to react with antigen-specific antisera. The breast tumour polymuncleotides, polypeptides and antibodies are useful for inhibiting development of breast cancer. The polymucleotides may be used to design primers and probes for detecting and monitoring breast cancer
                                                                                                                                                                                                                                                                                                                                                                                          Sequence

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the content of the inventory of the product of the inventory of the product of the inventory of the product of the product of the sequences of the inventory of the product of t ftp.wipo.int/pub/published_pct_

OSNA and OSP sequences have cytostatic activity, and can be used in vaccine production and gene therapy. An antibody that specifically binds to an OSP can be used for treating a patient with ovarian cancer, particularly for inducing an immune response against the ovarian cancer cell expressing the OSNA or OSP. The OSNAs and OSPs can also be used for diagnosing and monitoring the presence and metastases of ovarian cancer in a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New ovary specific genes and proteins, useful as a vaccine for patients with ovarian cancer, or for diagnosing and monitoring presence and metastases of ovarian cancer in a patient.

New microarray, comprising a matrix of cDNA probe from a set of probes immobilized to a solid surface in predetermined order, useful in the prognosis of patients with clear cell renal carcinoma.

Claim 1; SEQ ID NO 459; 179pp; English.

The present invention relates to a microarray comprising a matrix of at CC least one cDNA probe from a set of probes immobilised to a solid surface CC in a predetermined order, where a row of pixels corresponds to replicates CC of one distinct probe from the set. The probes are complementary to CC compared to non-aggressive types of clear cell renal carcinoma (CC-RCC) CC and that hybridise to the probes under high stringency conditions. The microarray is useful for the prognosis of patients with CC-RCC, wherein CC aggressive and non-aggressive CC-RCC tumour types are characterised by CC differential expression profiles of genes that hybridise with one or more CC probes immobilised on the microarray. The arrays are useful for gene CC expression profiling of tumour and normal tissues. The presents equence CC expressents a human cDNA sequence differentially expressed in aggressive cy.

The invention relates to a new isolated nucleic acid termed ovarian specific nucleic acid (OSNA) comprising: (a) a nucleic acid molecule that encodes any of 53 fully defined protein sequences appearing as ABU61018-ABU61070 (termed ovarian specific proteins, OSP); (b) any of 76 fully defined nucleotide sequences appearing as ABS92167-ABS92662; or (c) a sequence having at least 60% sequence identity to the nucleic acid molecule of (a) or (b). Also included are a method for determining the presence of an ovary specific nucleic acid (OSNA) in a sample, a vector comprising an OSNA, a host cell comprising the vector, an isolated OSP polypeptide, an anti-OSP antibody or fragment, a method for determining the presence of an ovary specific protein in a sample and a vaccine comprising an OSP or OSNA. The methods and compositions of the present invention are useful for identifying, diagnosing, monitoring, staging, imaging and treating ovarian cancer and non-cancerous disease in ovary tissue. The present sequence is an OSNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated OSNA nucleic acid and encoded polypeptide, useful for identifying, diagnosing, monitoring, staging, imaging and treating ovarian cancer and non-cancerous diseases in ovarian tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; gene; ss; ovarian specific nucleic acid; OSNA; ovarian cancer; non-cancerous ovarian disease; gene therapy; vaccine; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; Page 185-186; 224pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a new isolated nucleic acid termed ovarian CC specific nucleic acid (OSNA) comprising: (a) a nucleic acid molecule that CC encodes any of 53 fully defined protein sequences appearing as ABUGIO18-CC ABUGIO70 (termed ovarian specific proteins, OSP); (b) any of 76 fully defined nucleotide sequences appearing as ABUGIO18-CC defined nucleotide sequences appearing as ABUGIO18-CC encled of (a) or (b). Also included are a method for determining the CC presence of an ovary specific nucleic acid (OSNA) in a sample, a vector CC comprising an OSNA, a host cell comprising the vector, an isolated OSP polypeptide, an anti-OSP antibody or fragment, a method for determining CC the presence of an ovary specific protein in a sample and a vaccine CC comprising an OSP or OSNA. The methods and compositions of the present cc comprising an OSP or OSNA. The methods and compositions, desping, cc imaging and treating ovarian cancer and non-cancerous disease in ovary tissue. The present sequence is an OSNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

The invention relates to isolated polynuclectide (I) and polypeptide (II) creation (PCR) primers, oligomers, and for chromosome and gene mapping, cc and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed cc in diagnostics as expressed sequence tags for identifying expressed cc activity of (II) or to treat disease states involving (II). (II) is ceful for generating antibodies against it, detecting or quantitating a cc polypeptide in tissue, as molecular weight markers and as a food cc polypeptide in tissue, as molecular weight markers and as a food cc supplement (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders co involving aberrant protein expression or biological activity. The cc polypeptide and polymuclectide sequences have applications in cresponsible for genetic disorders or other traits to assess biodiversity cand to produce other types of data and products dependent on DNA and coding sequences of the invention. Note: The sequence data for this coding sequences of the invention. Note: The sequence data for this calcular did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at figure in the printed specification, but was obtained in celectronic int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                    Matches 159;
                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         31-MAR-2000; 2000US-00540217.

                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides human breast specific coding sequences and proteins. These can be used in the diagnosis and treatment of breast cancer and non-cancerous diseases of the breast. The present sequence is a coding sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New breast specific nucleic acids and proteins, useful for identifying, diagnosing, monitoring, staging, imaging, and treating breast cancer and non-cancerous disease states in breast tissue, and in gene therapy.

modified polylinker; Site 1: EcoR I; Site 2: Not I;
UI-E-EJ0 is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonuclectide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tags for this library are: fetal eyes,
AGAATCAGAG; lens, CGATTAGCGA; eye anterior segment,
AAATGCGCAT; optic nerve, CCATTAAGTG; retina, CCGCG; Retina
Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This
library was created for the program, Gene Discovery in the
Visual System, supported by National Eye Institute (NEI).
